Remarks from the Editor

Greetings colleagues. Effective this Newsletter, American Textile will be sending a monthly newsletter. The format will revolve on a monthly basis. One month we will introduce new products, the next month we will introduce or review new application technology and the third month we will discuss industry conditions and trends. We think you will find this new format interesting and helpful. As always, we encourage you to make suggestions to help us improve our newsletters.

Advanced Chemistry for a Modern Textile Industry

WashTechs 7104

We are pleased to introduce WashTechs 7104, a truly unique cellulase enzyme product. It is a highly concentrated powder product. It is unique because of its application versatility. By buffering WashTechs 7104 in different ways, the product is made suitable for three (3) distinct garment abrasion applications. First, it may be buffered in a manner to lend a typical neutral cellulase type high contrast abrasion and low back stain appearance. Second, it can be buffered differently to yield a product with a stronger low contrast abrasion appearance with reduced back stain similar to an engineered acid cellulase or formulated acid cellulase product. Third, WashTechs 7104 may be buffered in such a way to facilitate its application at ambient washing temperature and lending either a neutral or engineered acid abrasion appearance. This versatility means formulators can buy one base product that may be buffered in ways addressing these different applications - but without the need for three different base cellulase enzyme products. And, because the product is a powder, it is inexpensive to ship and has the extended shelf life typical of powder cellulase preparations.

Interested, please let us know and we can discuss matter further.
