Garment Washing

Remarks from the Editor

Anthony Upchurch

We are pleased to introduce a new product, **WashTechs 7102 C**.

WashTechs 7102 C

WashTechs 7102 C is a highly concentrated and versatile new cellulase product. It is an engineered cellulase for application as an abrasion aid in garment wet processing.

WashTechs 7102 C is the most concentrated cellulase we have ever offered to our customers. It is about 1.6 times the strength of our **WashTechs 7100 C** and **Indiage 2XL** and about 1.4 times the strength of our competitor's product **Max L**. Like **WashTechs 7100 C**, the product is very fast acting when compared to our competitors. This unique characteristic allows for excellent abrasion results in a very short cycle time.

WashTechs 7102 C is especially recommended for customers that have light manufacturing capability and can dilute cellulase preparations.

Summary of the Advantages of WashTechs 7102 C

Concentrated to provide optimum cost performance
Ideal for local dilution and stabilization
Uniform so as to result in consistent performance lot to lot
Fast acting to provide excellent abrasion in a short cycle time
Engineered to reduce back staining typical of most acid cellulase products

If you have interest in this product, please let us know and we can discuss further.

Samples are available upon request.
