

Technical Information

SurfTechs 4321

Description

SurfTechs 4321 is an amine oxide based non-rewetting wetting agent.

SurfTechs 4321 is highly recommended for application with durable press resin finishes and water repellent finishes to ensure even wet out. The product also functions as a good finish bath stabilizer.

Benefits

SurfTechs 4321 has the following beneficial characteristics.

- Fast wetting
- Non rewetting
- Effective at low dosage rate
- Good emulsifying and stabilizing properties
- Thermodegradeable
- Helps prevents can and clip build up

Typical Properties

Color	Straw
Texture	Liquid
PH of Solution	About 4
Specific Gravity	About 1.0
Solubility	Soluble

Preparation

SurfTechs 4321 may be used as is. However, it is recommended to pre-dilute with water prior to use.

Application

SurfTechs 4321 is typically added to the finish bath prior to the addition of other components.

Dosage

Dosage rates may be influenced by bath wet pickup rates. Typically the product is doses at

0.2% - 0.25% owb

Handling

Please refer to the Material Safety Data Sheet for details.

Storage

SurfTechs 4321 should be stored in a cool, dry and well-ventilated location.

Packaging

SurfTechs 4321 is available in drums.
